

Starfish Garden

Inspired by the dynamism and variegation of starfish and other sea creatures, *Starfish Garden* is a ceiling installation comprising large breathing inflatable objects lit from the inside. The “breathing” --inflation/deflation--and lights are sequenced for each element.

The fluid, lifelike movements of *Starfish Garden* is best achieved when installed in a dense configuration, allowing the movement of one Starfish to influence the others. We recommend a minimum of 15.
